From-BROWDY NEIMARK

Version with Markings to Show Changes Made

- 15. (<u>Twice Amended</u>) Method for providing an array of nucleic acid sequences bound to a carrier <u>according to claim 1</u>, comprising the steps of:
- a) identifying an AFLP-marker;
- b) providing a nucleic acid sequence that comprises a restriction fragment sequence corresponding to said AFLPmarker;
- c) attaching the nucleic acid sequence to the carrier; and
- d) repeating steps a) to c) for different AFLP markers to build up an array.
- 17. (<u>Twice Amended</u>) A method for providing an array of nucleic acid sequences bound to a carrier <u>according to</u> claim 1, comprising the steps of:
- a) providing a nucleic acid sequence that comprises at least one restriction fragment that has been derived from at least one cDNA
- b) attaching the nucleic acid sequence to the carrier; and
- c) repeating steps a) and b) for different cDNA-derived restriction fragments to build up an array.
